

# NEVADA

## Medication Abortion Care & Telehealth Policies At A Glance

### Abortion Care in Nevada

- *Women in Nevada have limited access to abortion care.* 88% of Nevada counties in 2017 did not have an abortion provider.<sup>1</sup>
- *Abortion is an essential, time sensitive health care service.* Medically unnecessary restrictions may push medication abortion care, which is a non-invasive abortion option that is approved for use up to 10 weeks in pregnancy, out of reach for some of those who need it.
- *Being denied abortion care negatively impacts the health and well-being of women and their families.* Women who were denied a wanted abortion had four times greater odds of living below the Federal Poverty Level and were more likely to experience poorer health outcomes for years after the pregnancy.<sup>2</sup>
- *People seeking abortion already face significant barriers to receiving quality healthcare.* Restrictions on abortion care and insurance coverage disproportionately impact people working to make ends meet, immigrants, young people, and women of color.<sup>3</sup>
- *Nevadans support access to abortion care.* A majority of Nevada voters call themselves pro-choice.<sup>4</sup>

### Telehealth: A Tool for Expanding Access to Medication Abortion Care in Nevada

- *Telehealth can expand access to abortion care.* Research shows that telehealth reduces logistical barriers to care and can help patients access care earlier in pregnancy.<sup>5</sup>
- *Telehealth access is important to Nevadans:* 78% of respondents in a 2022 survey indicated that having a telehealth option for abortion care would have been “very helpful” to them when seeking an abortion and would address issues of privacy and circumvent having to find childcare or reliable transportation.<sup>6</sup>

### Restrictions That Limit the Provision of Telehealth for Medication Abortion Care

- **Requirement that providers personally dispense medications to patients (and place a prohibition on mailing):** While providers are currently able to mail medications due to changes related to the public health emergency, the permanent policy still prohibits providers from dispensing medication through the mail.<sup>7</sup>
  - o **Impact:** This medically unnecessary restriction forces patients to visit a clinic to pick up their medication.
    - Research shows that medication abortion care can safely and effectively be dispensed at a clinic or through a pharmacy.<sup>8</sup>
- **Limitations on qualified health care providers:** Abortions, including medication abortion, can only be performed by licensed physicians.<sup>9</sup>
  - o **Impact:** This medically unnecessary restriction limits the number and type of providers available to provide abortion care. As part of changes made by FDA in 2016, non-physicians are allowed to provide medication abortion care, though state law may restrict it.<sup>10</sup>

- ACOG and other medical associations affirm that nurse practitioners, physician assistants and midwives can safely and effectively provide medication abortion care.<sup>11</sup>
- Research shows that expanding the pool of qualified health care providers would expand the availability and accessibility of care.<sup>12</sup>

## Restrictions That Limit Coverage of Telehealth for Medication Abortion Care

- **In Nevada, reimbursement as well as coverage and payment parity differ by modality and whether the patient has private v. public insurance:** As background, coverage parity requires the same *services* delivered in person be covered if delivered by telehealth. Payment parity requires the same *payment rate* or amount to be reimbursed via telehealth as would be if it had been delivered in-person.<sup>13</sup> While payment parity exists for live video (synchronous) modalities of care delivered through telehealth, regardless of whether the patient has public or private insurance, other barriers to care coverage exist:<sup>14</sup>
  - Private insurers may reimburse for store and forward<sup>15</sup> (asynchronous) and audio visits, but not at the same rate as an in-person visit.
  - Medicaid may reimburse for store and forward (asynchronous) service delivery, but not at the same rate as an in-person visit.
  - Audio only services are explicitly excluded from parity in Medicaid coverage.
  - **Impact:** These restrictions disproportionately impact people of color and those struggling to make ends meet as it limits access to care for patients who are in areas with limited bandwidth or who lack devices or sufficient minutes on cellular plans to ensure a telehealth video visit can take place.
- **Lack of clarity regarding home as an eligible originating site:** Even though the permanent policy is expansive, the Medicaid program's temporary Covid-19 flexibilities explicitly stated that reimbursement is not available when the patient's home is the originating site.
  - **Impact:** This could result in confusion by claims adjusters, in insurance contracts, or denial of claims, ultimately harming providers and patients.
- **There are no coverage protections for patients using private insurance:** Many payors do not cover abortion services in Nevada, including for telehealth.
  - **Impact:** This forces patients to pay out of pocket for abortion care. 40% of adult Americans reported not being able to cover an unexpected \$400 expense, which is less than the cost of first trimester abortion care.<sup>16,17</sup>
- **Nevada Medicaid is prohibited from covering most abortion services, including via telehealth:** Nevada's state Medicaid program only covers abortion care if the pregnancy is a result of rape or incest or to save the pregnant person's life.
  - **Impact:** A lack of coverage can create insurmountable barriers for women already struggling to get affordable health care.<sup>18</sup> Studies show that severe restrictions on Medicaid coverage or abortion forces one in four poor women seeking an abortion to carry an unwanted pregnancy to term.<sup>19</sup>

## Other Opportunities for Improving Access

- **Licensing:** Nevada is a part of the Interstate Medical Licensure Compact for physicians but does not participate in the Interstate Licensing Compact for Advanced Practice Registered Nurses (APRN) or Registered Nurses.
  - **Impact:** While APRN's are not yet able to provide abortion services in Nevada, participation in this compact would expand the availability of providers who could provide care to Nevada patients once the restriction is repealed.
