

WHAT'S AT STAKE FOR ACCESS TO MEDICATION ABORTION CARE?

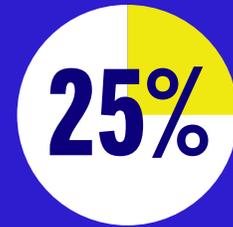

Attorneys general (AG) in ID, KS, and MO have filed a new lawsuit (*MO v FDA*) in front of Judge Kacsmaryk arguing that FDA must rollback the updates it made to how mifepristone, a safe and effective medication used in early abortion and pregnancy loss, can be prescribed and dispensed. **The FDA should set the standard for safe and effective access to medications, not state AGs.**

Mifepristone has **25 years** of data and real-world evidence of safety.

Medication abortion accounts for **more than half** of all abortions in the U.S.

Telehealth accounts for around **25%** of **ALL** abortions in the U.S.

CURRENT FDA-APPROVED REGIMEN

vs.

RESTRICTIONS PROPOSED IN *MO v FDA*

Available up to 10 weeks

Available up to 7 weeks

Allows telehealth appointments

Requires 3 in-person clinic visits

Pick up Rx at pharmacies

Pick up only from doctors and take pills at clinic

A SAFE, FDA-APPROVED MEDICATION FOR 25 YEARS SHOULDN'T BE BANNED BY POLITICIANS OR JUDGES IN ANY STATE.
